- Available in various shades enhanced by stunning effects and finishes

Technical performance characteristics:

- Adhesion
- Hard-wearing
- Fine thickness from 2 mm
- An extensive range of shades and looks
- Dry or wet sanding

Cutting-edge technology and aesthetic appeal

The outstanding properties of BEALSTONE are attributable to the expertise that BEAL possesses in the development of mortars, concretes and resins. Our unique know-how concerning highly specific coatings has enabled us to develop a decorative range with millimetre precision for various purposes.

THE DNA FOR BEAUTY

BEALSTONE has the « terrazzo », « cocciopesto » and « granito » genes in its DNA as well as all of the stone-based coatings contained in a mortar.

These legendary, thousand-year-old coatings, found from Asia to Europe and later in the New World, have witnessed many historical events and have been trampled upon by countless numbers of people throughout the ages.

These decorative coatings are reappearing today and in particular BEALSTONE which now combines functionality, aesthetic appeal and ease-of-use.

BEALSTONE is applied in a thin layer and can now be used for both wall and floor coverings.

BEALSTONE can even be used on furniture.

A wide-angle photograph of a modern restaurant interior. The floor is covered in a dark, speckled, seamless coating. Several long wooden tables are arranged in the space, each surrounded by chairs with a patterned fabric and black metal frames. Large windows on the left side of the room provide natural light. In the background, a service counter and staff members are visible. The ceiling features exposed beams and modern pendant lights.

BEALSTONE®

A CUSTOMIZED, SEAMLESS COATING

BEALSTONE can slip in anywhere to form a resilient, seamless coating providing a continuous look depending upon the surface.

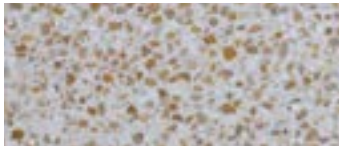

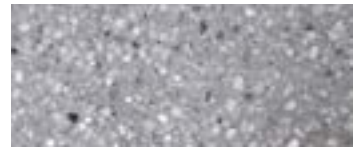

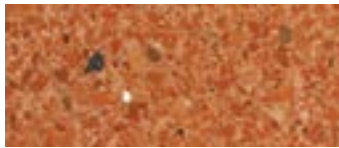

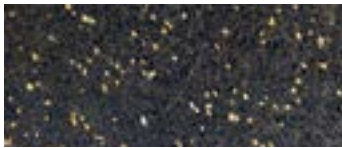

INCREDIBLE COMBINATIONS

The vast array of combinations with such materials enables exact and distinctive personalisation.

Shell fragments, metal with shards of broken bottles or mirrors are some examples of what can be used to give BEALSTONE a magnificent look.

Preselected aggregates are available for BEALSTONE but you also have the option of using stones or other substances from your region.

*BEALSTONE can be combined with
stone, wood, glass, metal, etc.*

REDISCOVERED SPLENDOUR

« Terrazzo » floors can be renovated today thanks to the vast range of materials which can be integrated into BEALSTONE, a specific pigmentation in the material and the expertise of the installer.

Old coverings from the Art Deco period can be restored in a way which is almost identical to the original re-establishing their beauty.

A ROBUST MIXTURE

BEALSTONE is a coating comprising various materials.

All of its components are blended to create a highly resistant covering.

BEALSTONE[®]

A CHALLENGE FOR THE IMAGINATION

For creative people, BEALSTONE provides a wide range of decorative options both in terms of finishes and where it is used: sink units, bathrooms, tables and work surfaces.

ENERGY ACTIVATOR

BEALSTONE activates and mobilises energy by creating synergies between the architect, the client, the installer and BEAL.

With millions of possible combinations, BEALSTONE genuinely transforms your interiors and exteriors.

A RESPONSIBLE AND SUSTAINABLE MATERIAL

Like all BEAL products, BEALSTONE meets the three key requirements of sustainable development.

Economy

The wide-ranging options for application and combinations of binders/aggregate offered by BEALSTONE provide each user with customisable added value.

As the mixture is prepared on site, any excess of products can always be reused for other projects and/or other types of applications.

Social

The very nature of BEALSTONE and the on-site training opportunities encourage the use of local labour.

Environmental

BEALSTONE enables existing surfaces to be recovered and/or repaired which not only results in less waste but also far fewer restrictions on renovation or new-build projects.

Due to its fine thickness and low consumption as well as the use of local aggregates, BEALSTONE ensures lower transport costs and a significant reduction in environmental footprint.

A black and white photograph showing a person from behind, wearing a dark tank top, using a long-handled trowel to apply a material to a surface. The person's arm and hand are visible, holding the trowel. The surface being worked on appears to be a rough, textured material, possibly concrete or stone. The background is dark and out of focus.

BEALSTONE[®]

AN ACCESSIBLE PRODUCT

Training

Users and designers can envisage new ways of applying BEALSTONE products every day. Careful and efficient application requires the mastery of basic techniques.

A programme combining practice and theory

BEAL organises training on the BEALSTONE application techniques on an ongoing basis. Covering both theory and practice, participants are given an insight into sanding and polishing methods by experienced trainers.

Interested?

BEALSTONE[®]

A TRADEMARK PRODUCT

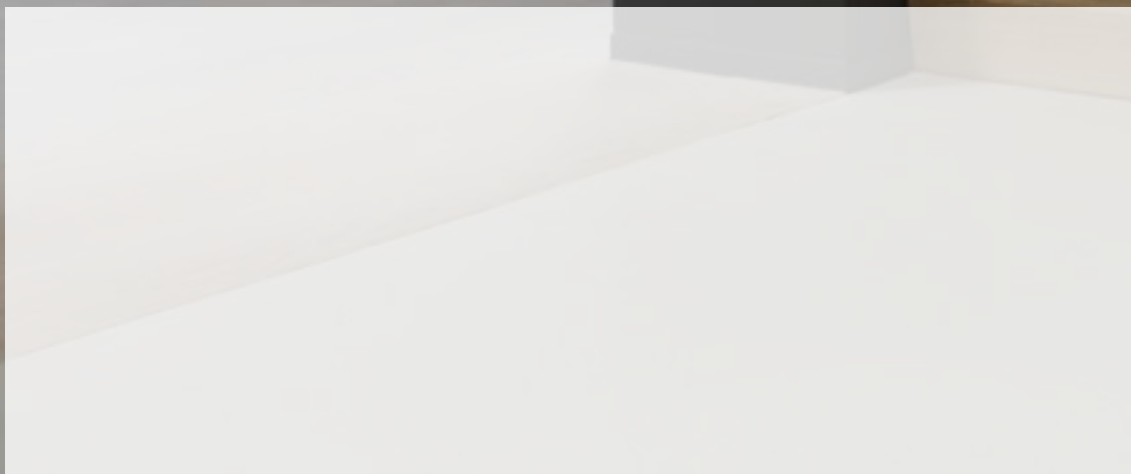

Beal is the only company that develops and manufactures the BEALSTONE brand.

Beware of imitations and counterfeits of BEAL trademarks, products and training courses. They do not meet the same quality standards and do not guarantee the same results.

Ask your installer for project references and check your choice on a sample using ad hoc protection before placing an order.

BEAL designs, develops, manufactures and distributes other highly technical products: coverings for façades, water repellents CAPILASIL to combat rising damp and to waterproof façades, MORTEX coverings, etc.
